### Make: LED Binder Clip Bling

#### 1. Make a circuit

1. Slide 1 or 2 LEDs onto a coin battery. The longer lead goes on the + side. No light? Flip the LED around.
2. Cut a foam rectangle. Make it big enough to cover the battery when folded in half.
3. Hold the battery, LED, and foam together with a binder clip. Take it apart for now.

Time to make it interesting...

#### 2. Decorate your circuit

1. Cut out foam shapes to make your bling. Attach pieces together with glue or glue dots. Make holes for LEDs with a pencil or by folding and cutting a tiny line at the fold.
2. Add LEDs to your foam creation. Slide the battery back in. You may need to bend the leads a little to get it into the binder clip.
3. Hold everything together with a binder clip.

Add layers, add colors, and make it your own!

#### 3. Attach your bling

1. Use a piece of fuzzy wire to attach your bling to your hand, clothes, backpack, or anything you like!
